

Yamin Hossain

AI-Native Software Engineer | LangGraph

Rajshahi, Bangladesh | +880-01706960268 | Email: contact@yamin.dev | GitHub: github.com/yamin | LinkedIn: linkedin.com/in/yamin

AI-Native Software Engineer specializing in production LLM agents, LangGraph pipelines, and RAG systems. Ships complete products end-to-end with production reliability practices: async queuing, exponential backoff, and observable multi-agent pipelines. Ready to own hard problems from day one on early-stage remote teams.

SKILLS

AI & Agents: LangGraph, LangChain, RAG pipeline, pgvector, Prompt Engineering, Tool Calling, Guardrails

Frontend: React.js, Next.js, TypeScript, Tailwind CSS, HTML, CSS, Zustand

Backend: Python, FastAPI, Node.js, Express.js, TypeScript, BullMQ, REST APIs, WebSocket, SSE

Databases: PostgreSQL, Prisma ORM, Redis, Neon, MySQL

Infrastructure: Docker, Vercel, Render, Turborepo, Git & GitHub, CI/CD pipeline

PROJECTS

PR REVIEW AGENT - Full Stack Web Application (June 2026 - Present)

Personal Project | Live Demo | GitHub

- Built a GitHub App (Marketplace-installable) that ingests 6 months of merged PR history and posts inline review comments referencing specific past decisions not generic rules making team knowledge searchable.
- Designed a 6-node LangGraph pipeline with chunked diff processing and pgvector cosine similarity search across 384-dimensional embeddings, surfacing decisions like 'team rejected this in PR #234'.
- Architected webhook -> BullMQ/Redis queue -> FastAPI inference layer -> Next.js dashboard with exponential backoff, rollback handling, and structured logging for incident traceability.

Tech: Next.js, TypeScript, Node.js, Express.js, Python, FastAPI, LangGraph, LangChain, pgvector, PostgreSQL, BullMQ, Redis, Docker

BUG REPRODUCER - Autonomous End-to-End Debugging API Service (Feb 2026 - Present)

Personal Project | Live Demo | GitHub

- Built an autonomous agent that takes a GitHub issue URL, reproduces the bug, writes a failing test, generates a fix, and opens a PR completing the full debugging cycle without human intervention.
- Designed a 7-node LangGraph pipeline with conditional retry logic: when a test fails for the wrong reason, the agent parses the error output and rewrites the test using that context rather than retrying blindly.

Tech: Next.js, TypeScript, Node.js, Express.js, Python, FastAPI, LangChain, LangGraph, PostgreSQL, Prisma, BullMQ, Docker

CONTRIBUTION

Remotion - React framework for programmatic video creation (52.6k+ GitHub stars) remotion.dev

- Added preserveSilence option to `renderMediaOnWeb()`, ensuring silent head/tail frames are retained in the output file fixing timing misalignment when feeding exports into ASR transcription pipelines. (PR #7074)
- Extended playbackRate validation in `@remotion/player` from +4 to +10 to match modern browser capabilities (PR #7107)

Tech: TypeScript, React, Web Audio API, Bun

EDUCATION

Varendra University (Oct 2022 - Mar 2026)

Bachelor of Engineering - Electrical and Electronic Engineering
